# Main updates of TattooPrinter iOS version 2.7.0

## 1. Optimize the unified page layout function

2. Added beautification function menu – – parameters
(Provides conditional functions for the gamma line grayscale, sharpening, contrast, saturation, and brightness parameters of the image)
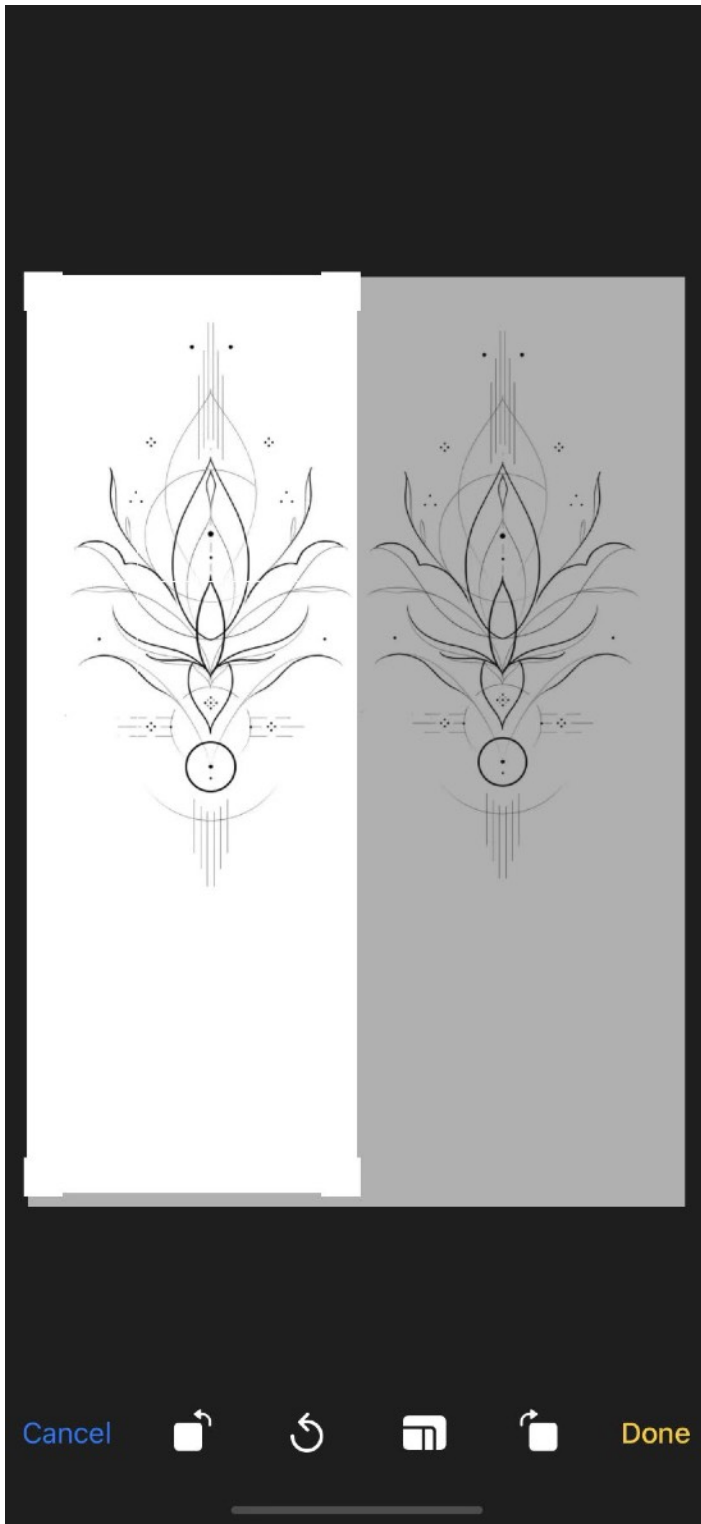

## 3. Added beautification function menu––Filter

## 4. Added beautification function menu – Lines

5. Added custom image cropping function

## 6. Optimize the function of dividing large images into equal parts

7. Print preview page, add "matte" density level
(Matte density is more suitable for realistic pictures, the original four gears remain unchanged)

## 8. Printer Bluetooth list, add printer notes
(Notes are cached locally by default, that is, the notes will be deleted at the same time after the APP is deleted, and the notes need to be added again)

## 9. My module, added language switching within the APP
